

•
in components we trust

- They're a *renderable primitive*

- Pass them around

```
{{component dynamicNameBinding  
with=value}}
```

- organizable and exported by default

```
{{users/list/admin userData=user}}
```

"components are first class citizens"

in components we trust

- Build bridges, not walls.
`{{ #my-component }}` **hash tag my component, hash tags are cool**
`{{ /my-component }}`
- Do work, setup a component, yield it out. Hide the implementation.
- Unless you're a leaf UI component, "boundary component", "wrapper component" you should probably be a block component.
