

```
{{user-list  
  users=users  
  loadUsers=(action 'fetchUsers')  
}}
```

```
{ {app-button onClick=(action loadUsers  
type) } }
```

```
actions: {  
  fetchUsers(userType) {  
    this.get('userService').fetch(userType)  
  }  
}
```

user-lists.hbs

Actions

- They're callbacks, they're functions.
- They're passed down as data (functions are data)
- They're invoked later (usually by a user action)
- `{{action}}` is a function helper for *scoping* and *lookup*.
 - scoping on the current template context
 - lookup, string => actions hash of js, reference on js

```
actions: {  
  fetchUsers(userType) {  
    this.get('userService').fetch(userType)  
  }  
}
```

dashboard.js

```
{{user-list  
  users=users  
  loadUsers=(action 'fetchUsers')  
}}
```

dashboard.hbs

```
{{app-button onClick=(action loadUsers  
  type)}}}
```

user-list.hbs
